PhD candidate and Technical Research Personnel in the Biomedical Engineering Department at Hanyang University, South Korea.

I work with Professor In Young Kim in the Smart Ubiquitous Healthcare Lab.

I completed my B.S. in Biomedical Engineering at Hanyang University and can handle most bio-signals and medical images. In particular, I can design the whole systems for electrical bio-signals, including hardware design, firmware coding and analysis.

Through the analysis of bio-signals and medical images, I have become interested in computer science and have a need for related research. So, we created an A.I. team in the lab and I am currently working on this team, doing CNN and RNN based research.
